

Flame ARRESTER

YouTube

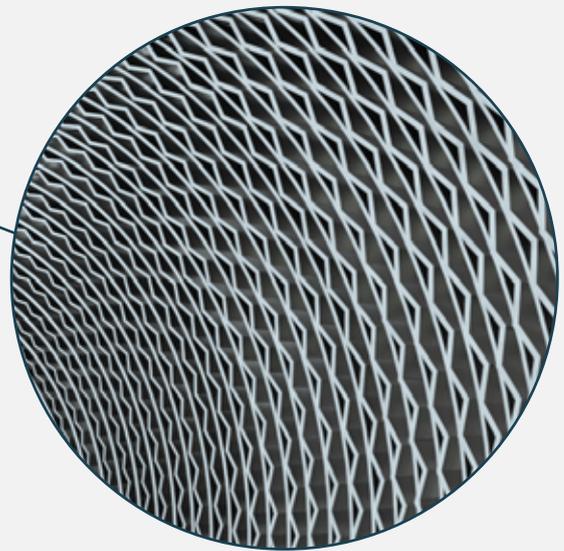

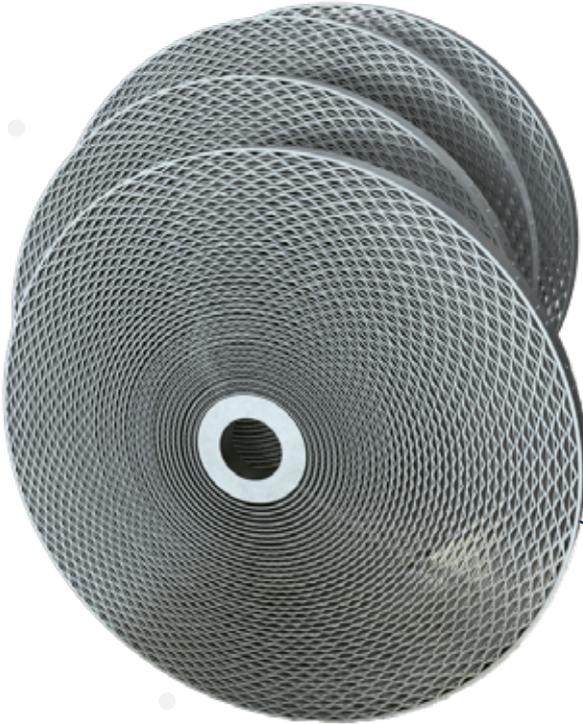

Certificates & Standards

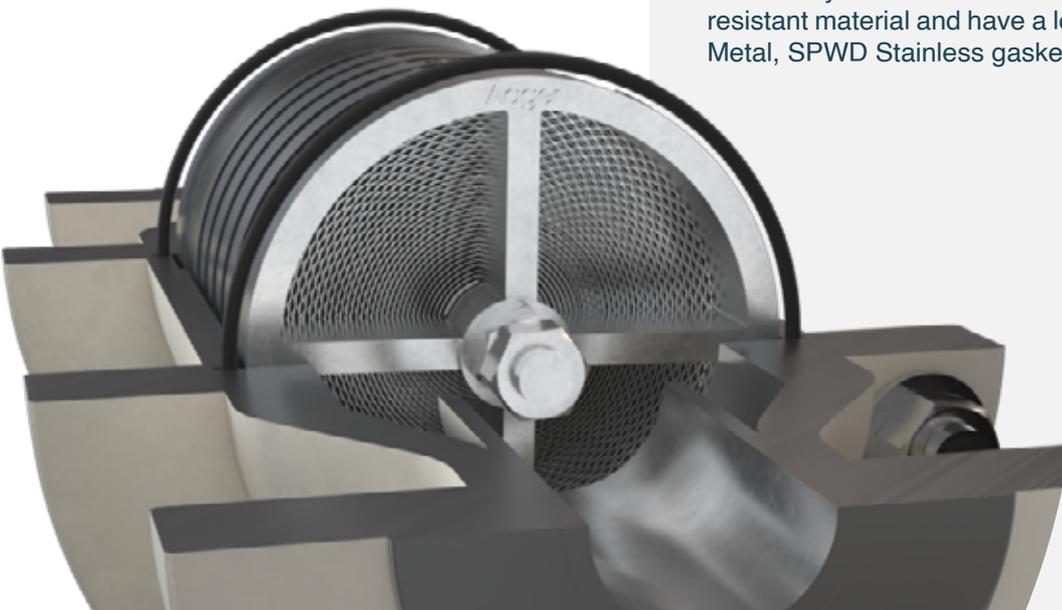

High Quality Flame Arrester Elements

Storagetech™ uses high quality Flame Arrester Elements in order to prevent corrosion and increase the durability of the discs. Multiple usage of internal flame cell element; reduces the risk of malfunction. Provides much better protection. Thanks to the winding technology developed by Storagetech™; MESG (Maximum Experimental Safe Gap) on the discs are created to achieve maximum performance. A homogeneous surface provides a better gas passage and prevent differential pressure drop points.

Robust Shock Absorber Design

Storagetech™ Flame Arrester has durable and robust design to prevent flame and shock waves which maybe transferred through the pipeline. Excellent gas tight performance. Gaskets are neither affected by heat nor corrosions effects. All seals are made of heat resistant material and have a long service life. Buna-N, PTFE, Soft Metal, SPWD Stainless gaskets are available.

Asme & En Standarts

All Storagetech™ Flame Arresters are ATEX certified for up to 18”

Storagetech™ Flame Arresters; design, engineering and tests are carried out according to ASME and EN norms as well as international codes as per client specs. ASME U-Stamp, PED Certification, MILLTest Certification and code compliant productions can be performed.

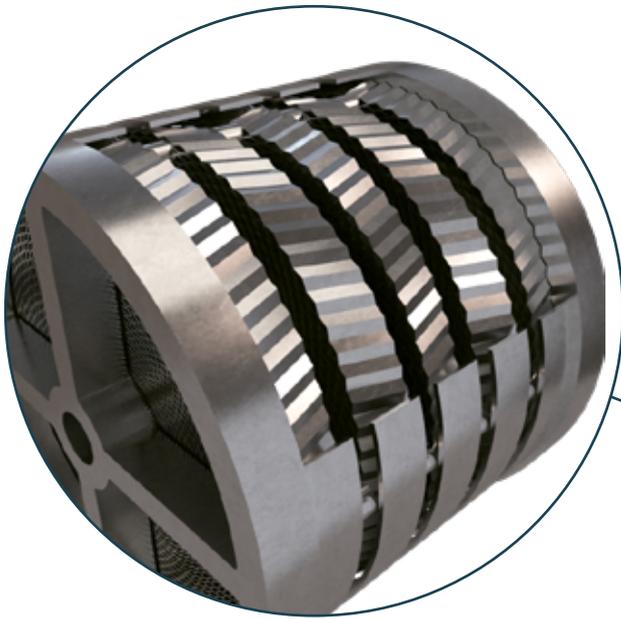

Easy Assembling & Maintenance

Storagetech™ Flame Arresters are easy to remove, maintain and assembling. Its unique design enables to remove Core itself by not removing whole equipment therefore no need renew connection gaskets each time.

Reverse Windings

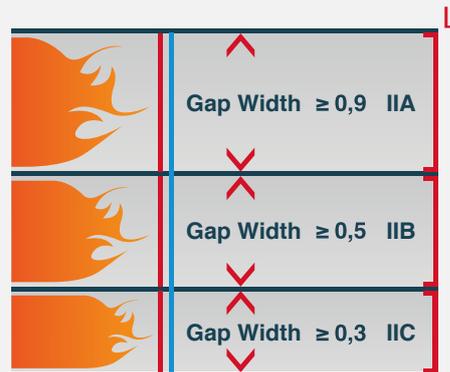

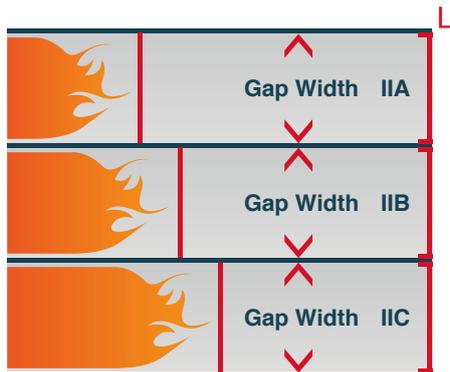

Reverse winding technology provide better protection by extending the path for flame. Opposite angles help to keep the flame length under control by extending the path. Provide the damping of the flame with the effect of changing the direction.

Mesg Explosion Groups

Each type of gas has different flame spread characteristics. Storagetech™ provides solutions suitable for IIA, IIB and IIC explosion groups with the EN 60079-20-1 method.

Low Pressure Drop

Storagetech™ Flame Arresters provides ~30% less pressure drop compared to ordinary flame arresters with its unique Technologies

Protective Coating & Painting

PTFE coating paint, protects against weather conditions; increases life time, and decreases maintenance cost. Since all parts are painted separately, there is no gap in the connection parts.

Flame Arrester

Vertical, in-line, deflagration

Model 300

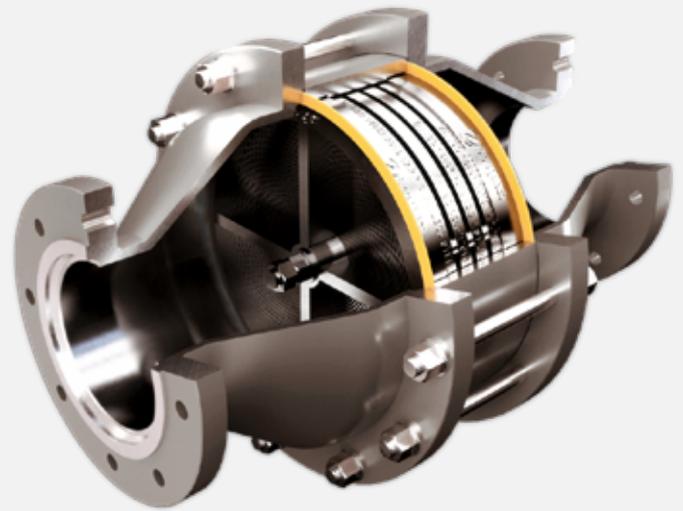

Product Description

Storagetech™ Model Number 300 Flame Arrester is a safety device that has a flame barrier with a large number of defined passage gaps, whose gap cross section is set with regard to the properties of the flowing gas, is cooled effectively and secured against a flame flashback in the case of continuous combustion. They are typically mounted to a flange or pipe, which connects the vapor space of a storagetank or a pipeline.

Storagetech™ Model 300 Vertical In-line Deflagration Flame Arrester is intended for pipeline installation close to the source of any potential ignition source by minimising flame speed and the development of an explosive pressure.

The flame quenching element is designed to be three or four times the area of the pipe in which it is installed, and is assembled between two flanged reducing spools.

The element comprises a tightly rolled scroll or scrolls of crimped stainless steel ribbon to form passages through which the vapour passes.

StorageTech provides the high quality and reliable solutions for your needs with 40 years of experience.

Your investments will be much safer with Storagetech™ Flame Arrester solutions, which are completely produced in accordance with international norms.

Standard Sizes	1" to 12" DN25 to DN300
Body / Flanges	1- Carbon steel 2- Stainless steel AISI 316 –L or 304-L 3- Aluminium 4- Customer Specification
Flange Drilling	API Class 150, PN16, and Special
Flame Element	Stainless steel AISI 316 –L or 304-L
O-ring Seal	Nitrile, Special
Screen	Stainless steel
Weather Hood	Carbon steel, Stainless steel or Aluminium
Paint Finish	1- Powder Coating, Colour RAL 9006 2- Epoxy Paint, Colour RAL 9006 3- Customer Specification
ATEX Cert	Ex II 1/2 G IIA

Construction

The area of each passage determines level of protection that the element provides. Storagetech™ Model 300 In-line Deflagration Flame Arrester has a Maximum Experimental Safe Gap as per standard, and is suitable for gas groups IIB and IIA.

Under normal operation the flame element allows the bi-directional flow of air and flammable vapour, however it introduces additional pressure loss, and this must be considered in the design of the system. If a fire or ignition occurs external to the equipment and ignites the flammable discharge, the flame arrester will quench the leading fire by absorbing and dispersing the heat as it passes through the element.

The unit is supplied with an earth point, copper tag and cable. Periodically the cell can be removed for cleaning or replacement.

The Model 300 deflagration flame arrester is suitable for quenching subsonic flames and should be mounted in the vertical plane, close to the source of any potential ignition. It is suitable for use with any of Storagetech™ Pressure Relief, and Pressure-Vacuum Valves, and should be installed on the inlet to the Pressure Relief unit.

Design & Manufacturing Specifications

The size of the vent should be calculated in accordance with API Standard 2000 (ISO 28300) - Venting Atmospheric and Low-Pressure Storage Tanks or other international standards.

Manufacturing Materials

Housing	Cell	Gas Group
Carbon Steel	304 S.S.	IIA*
304 S.S.	316 S.S.	
316 S.S.		
Aluminum		

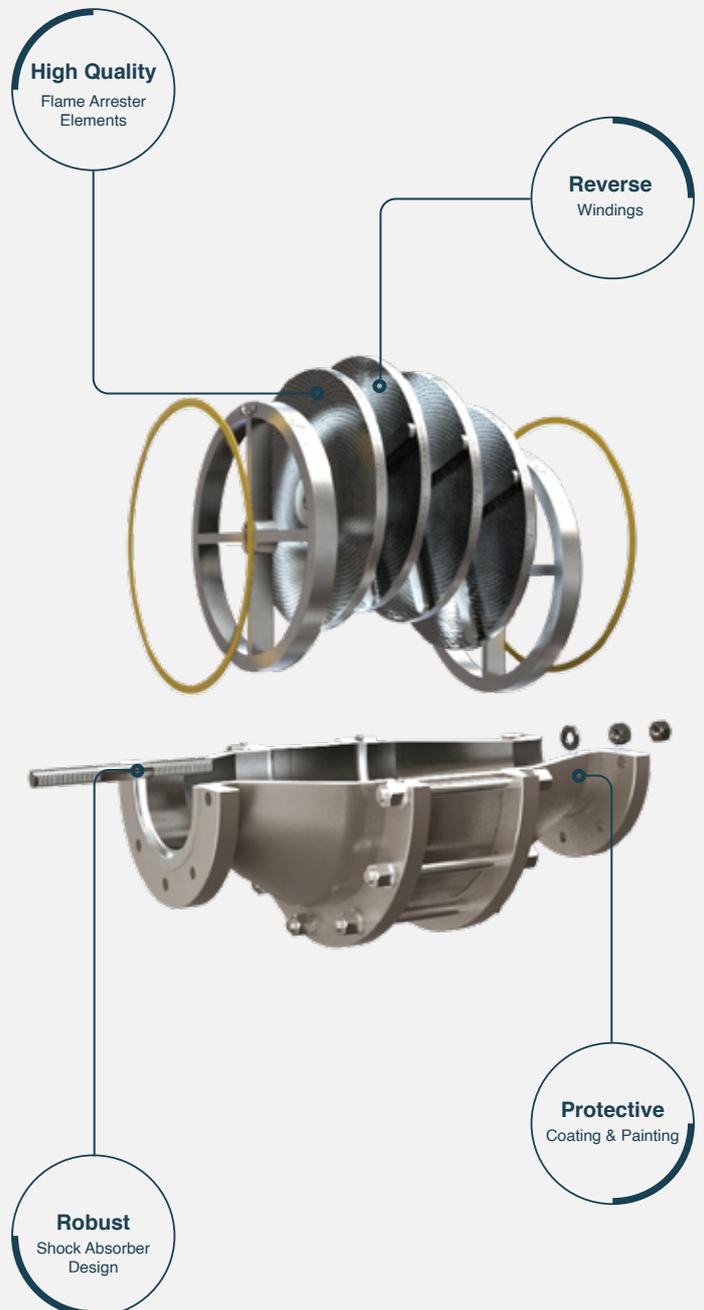

Key Features

- Internal materials are AISI 316 or 304 stainless steel.
- Easy to clean internal materials.
- Easy to install.
- Comes with the paint color you choose.
- Standard manufacturing comes with API 150 class flange.
- Protection cap is manufactured from aluminum material.

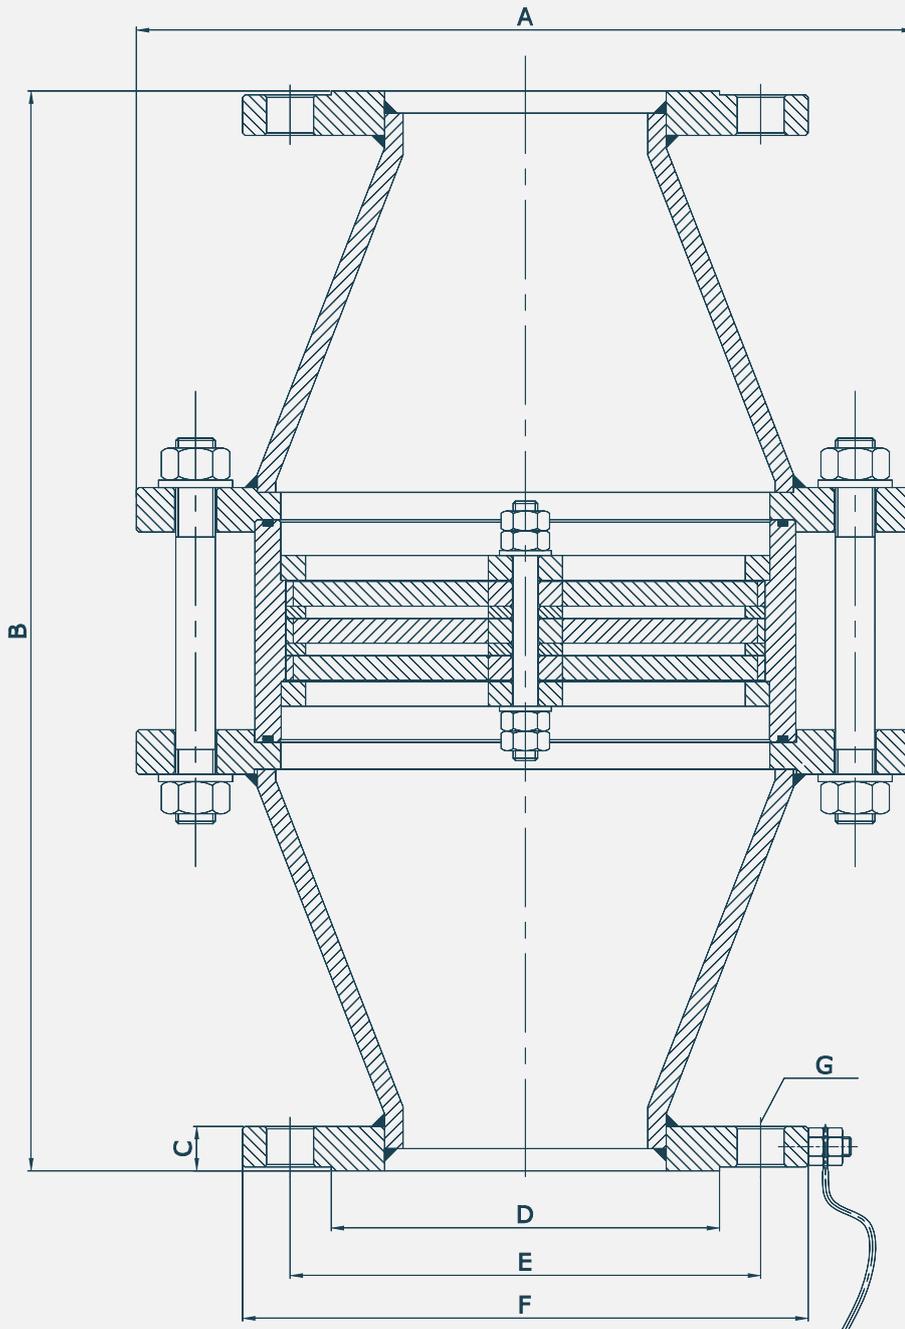

Product Benefits

StorageTech™ Flame Arrester Model 300 provides safety. It blocks the flame and does not allow flame travel through a pipeline or any in-out-let. Protects environment. Flame arrester prevents your facility against fire that is caused by explosions.

Flame Arrester

Vertical, in-line, detonation

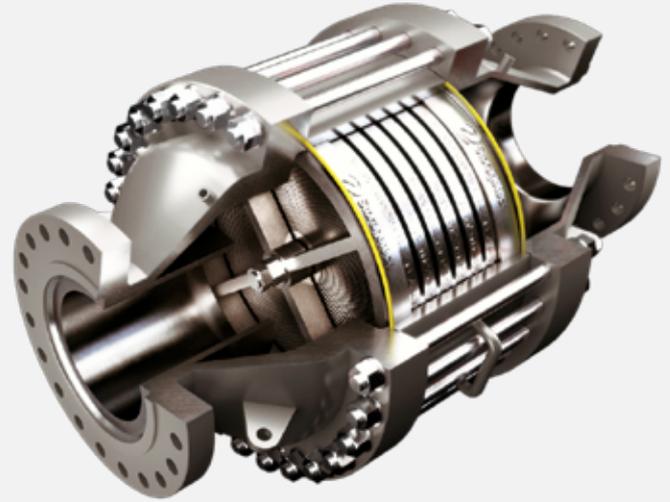

Model 320

Product Description

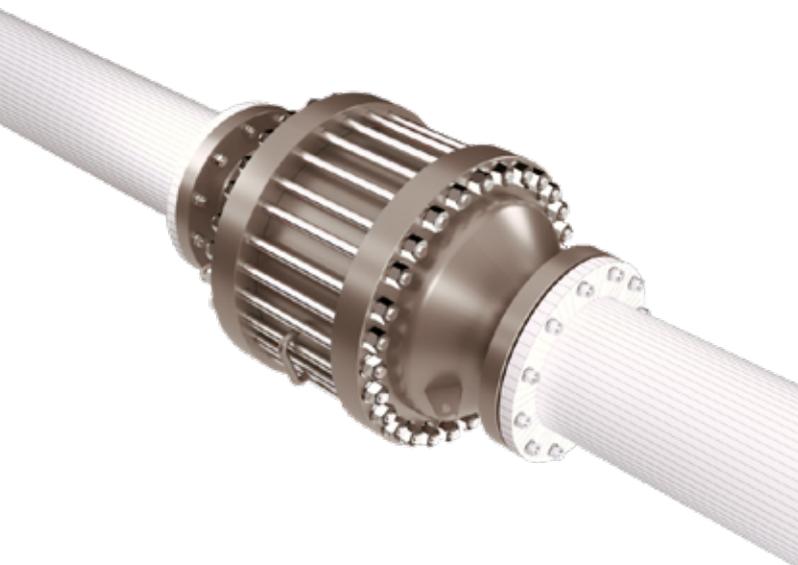

Storagetech™ Model 320 In-line Detonation Flame Arrester is designed for installation in gas pipelines. Detonation occurs when a flame travelling through the pipeline reaches supersonic velocities, usually as a result of the pipeline configuration or pipeline surface roughness. Changes in gas density and pressure causes the flame velocity to metamorphose from subsonic to supersonic. The flame quenching element is designed to be three or four times the area of the pipe in which it is installed, and is assembled between two angled reducing spools. The element comprises a tightly rolled scroll or scrolls of crimped stainless steel ribbon to form passages through which the vapour passes. The area of each passage determines level of protection that the element provides.

ERGIL Storagetech™ Model 320 In-line Detonation Flame Arrester has a maximum experimental safe gap (MESG) as per the standard, and is suitable for gas groups IIB and IIA. The detonation flame arrester is more robust than the degradation flame arrester, and contiguous scrolls have smaller MESGs to withstand higher pressures and to quench detonations. It should be installed in the pipeline where there is a significant distance between the unit and the potential source of ignition.

StorageTech provides the high quality and reliable solutions for your needs with 40 years of experience.

Your investments will be much safer with Storagetech™ Flame Arrester solutions, which are completely produced in accordance with international norms.

Standard Sizes	1" to 12" DN25 to DN300
Body / Flanges	1- Carbon steel 2- Stainless steel AISI 316 –L or 304-L 3- Aluminium 4- Customer Specification
Flange Drilling	API Class 150, PN16, and Special
Flame Element	Stainless steel AISI 316 –L or 304-L
O-ring Seal	Nitrile, Special
Screen	Stainless steel
Weather Hood	Carbon steel, Stainless steel or Aluminium
Paint Finish	1- Powder Coating, Colour RAL 9006 2- Epoxy Paint, Colour RAL 9006 3- Customer Specification
ATEX Cert	Ex II 1/2 G IIA

The unit is supplied with an earth point, copper tag and cable. Temperature sensor can be provided upon request. The element can easily be removed for cleaning or replacement.

Manufacturing Materials

Housing	Cell	Gass Group
Carbon Steel	304 S.S.	IIA, IIB *
304 S.S.	316 S.S.	
316 S.S.		
Aluminum		

Design & Manufacturing Specifications

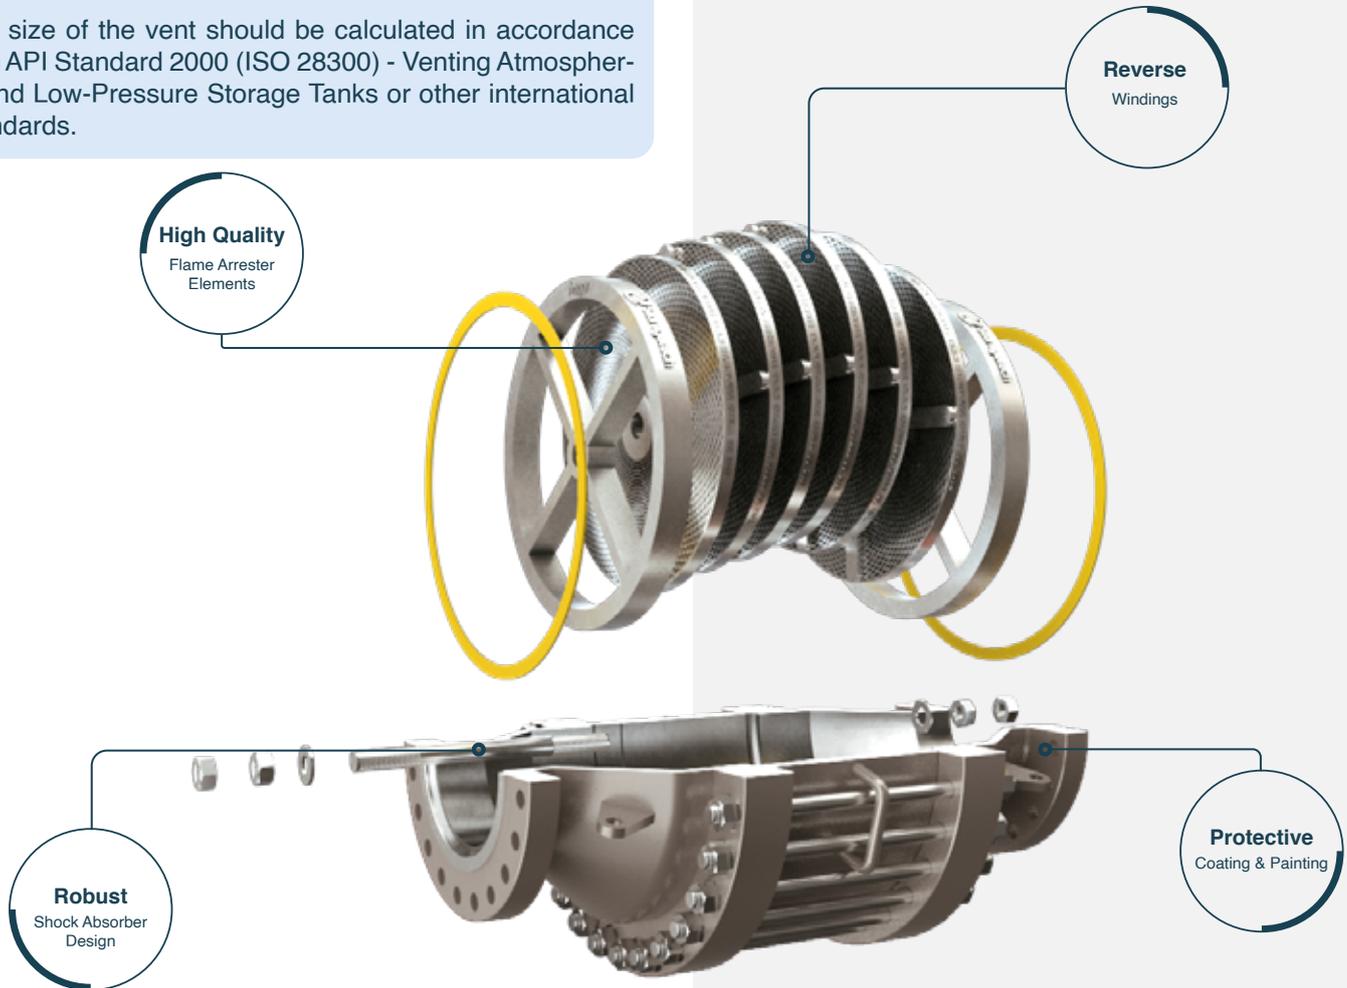

The size of the vent should be calculated in accordance with API Standard 2000 (ISO 28300) - Venting Atmospheric and Low-Pressure Storage Tanks or other international standards.

Product Benefits

- Storagetech™ Flame Arrester Model 310 provides safety, It blocks the flame and does not allow flame travel through a pipeline or any in out-let.
- Protects environment. Flame Arrester prevents your facility against fire that is caused by explosions.
- Stop the shockwaves and controls the flashback explosions.

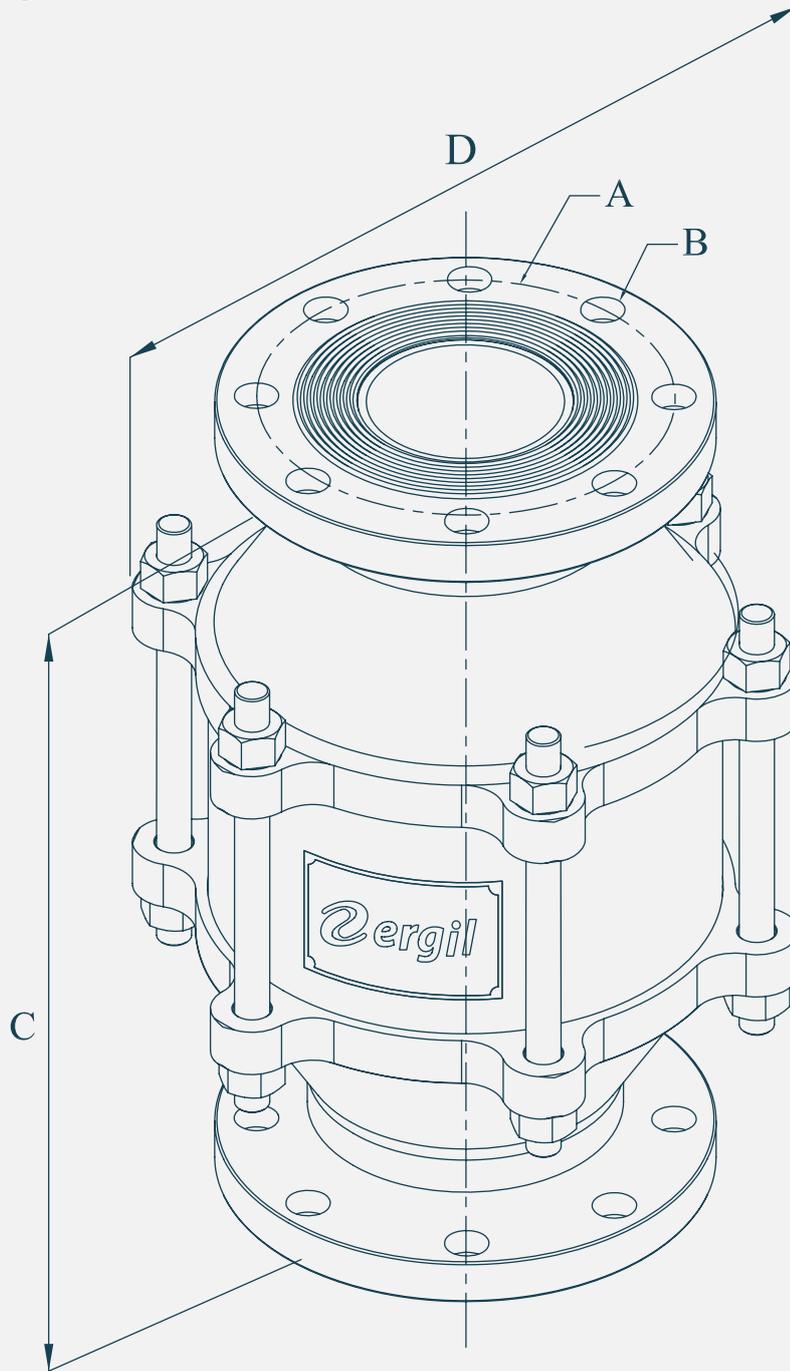

Certificates & Standards

Key Features

- StorageTech™ PW Model 320 internal materials are AISI 316 or 304 stainless steel.
- Easy to clean internal materials.
- Easy to install. You do not need a special tool or experience to install the StorageTech™ Flame Arrester Model 320.
- StorageTech™ PVV Model 320 comes with the paint color you choose.
- Standard manufacturing comes with API 150 class flange; however other flange types are available on request.

Flame Arrester

Horizontal, in-line, deflagration

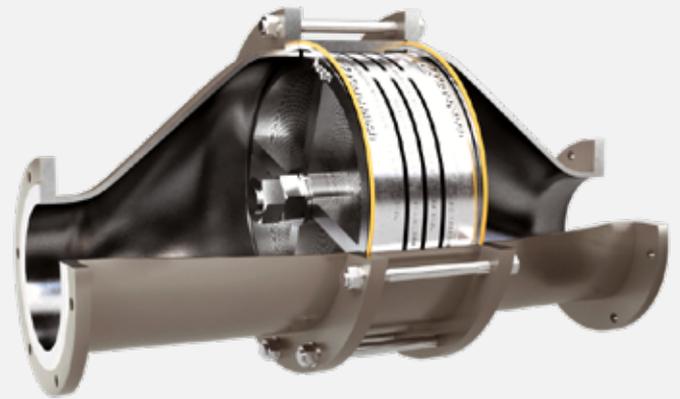

Model 301

Product Description

Flame Arresters are passive devices that prevent the propagation of a flame or fire from entering into an opening in a pipeline or vessel discharging flammable vapour. The flame quenching element is designed to be three or four times the area of the pipe in which it is installed, and is assembled between two flanged reducing spools. The element comprises a tightly rolled scroll or scrolls of crimped stainless steel ribbon to form passages through which the vapour passes.

The area of each passage determines level of protection that the element provides. ERGIL Storagetech™ Model 301 In-line Deflagration Flame Arrester has a Maximum Experimental Safe Gap as per standard, and is suitable for gas groups IIB and IIA. Under normal operation the flame element allows the bi-directional flow of air and flammable vapour, however it introduces additional pressure loss and this must be considered in the design of the system.

If a fire or ignition occurs external to the equipment and ignites the flammable discharge, the flame arrester will quench the leading fire by absorbing and dispersing the heat as it passes through the element. The unit is supplied with an earth point, copper tag and cable. Periodically the cell can be removed for cleaning or replacement. The Model 301 Deflagration Flame Arrester is suitable for quenching subsonic flames and should be mounted in the horizontal plane, close to the source of any potential ignition. It is suitable for use with any of Storagetech™ Pressure Relief, and Pressure-Vacuum Valves, and should be installed on the inlet to the Pressure Relief unit.

StorageTech provides the high quality and reliable solutions for your needs with 40 years of experience.

Your investments will be much safer with Storagetech™ Flame Arrester solutions, which are completely produced in accordance with international norms.

Standard Sizes	1" to 12" DN25 to DN300
Body / Flanges	1- Carbon steel 2- Stainless steel AISI 316 –L or 304-L 3- Aluminium 4- Customer Specification
Flange Drilling	API Class 150, PN16, and Special
Flame Element	Stainless steel AISI 316 –L or 304-L
O-ring Seal	Nitrile, Special
Screen	Stainless steel
Weather Hood	Carbon steel, Stainless steel or Aluminium
Paint Finish	1- Powder Coating, Colour RAL 9006 2- Epoxy Paint, Colour RAL 9006 3- Customer Specification
ATEX Cert	Ex II 1/2 G IIB

Manufacturing Materials

Housing	Cell	Gass Group
Carbon Steel	304 S.S.	IIA
304 S.S.	316 S.S.	
316 S.S.		
Aluminum		

Design & Manufacturing Specifications

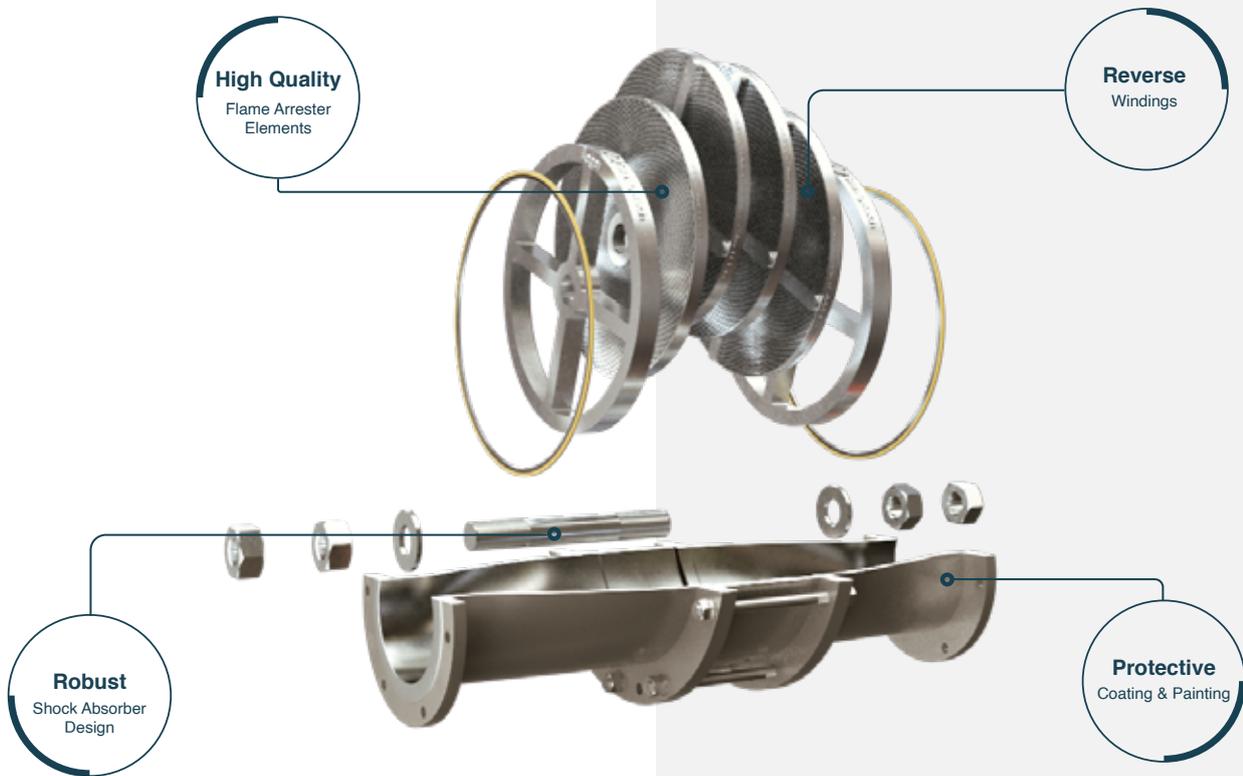

The size of the vent should be calculated in accordance with API Standard 2000 (ISO 28300) - Venting Atmospheric and Low-Pressure Storage Tanks or other international standards.

Product Benefits

StorageTech™ Flame Arrester Model 301 provides safety. It blocks the flame and does not allow flame travel through a pipeline or any in out-let. Protect s environment. Flame arrester prevents your facility against fire that is caused by explosions.

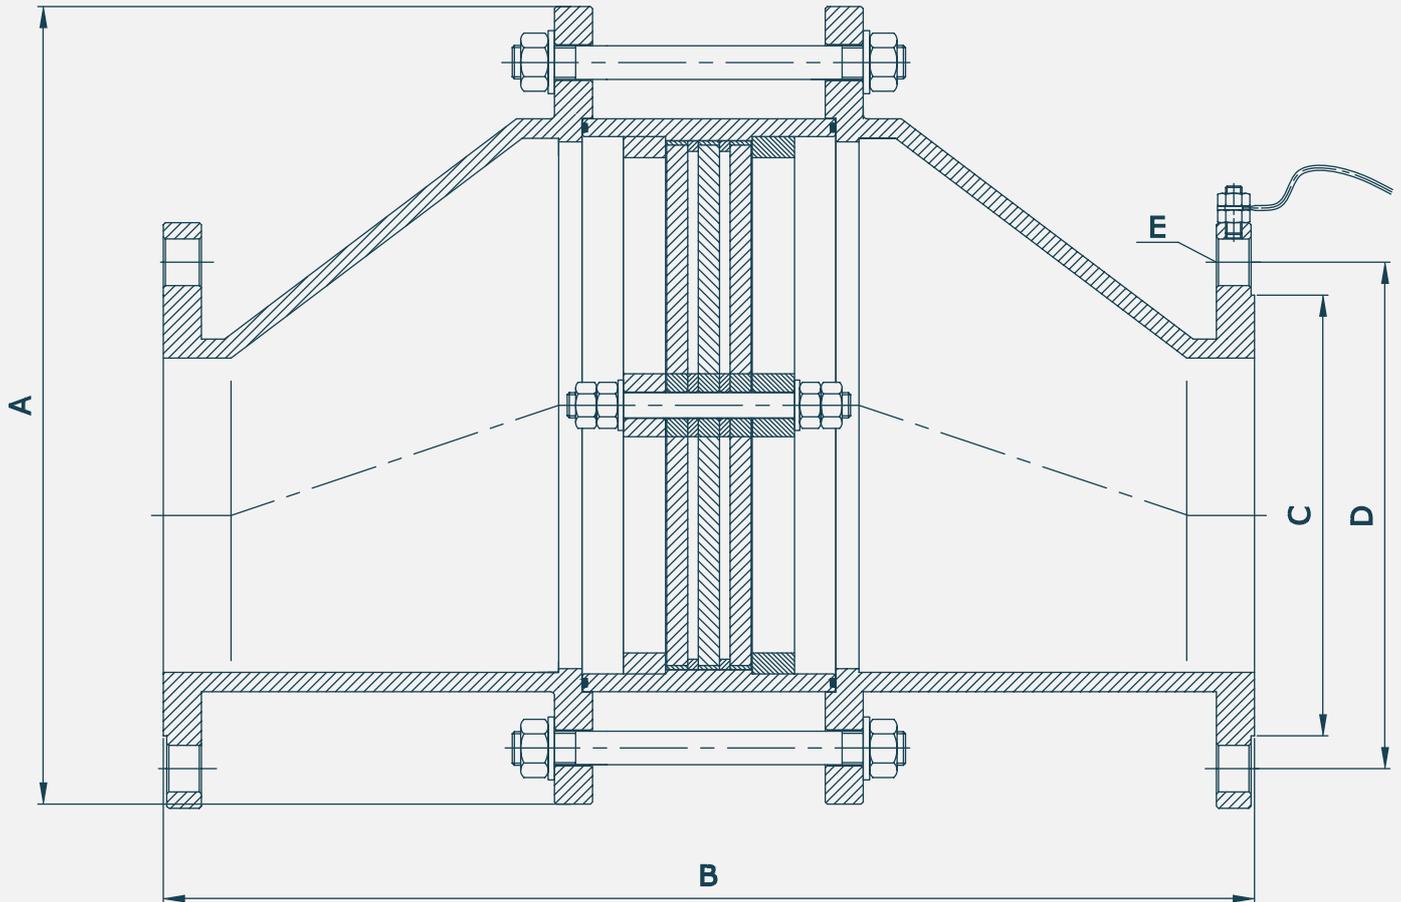

Certificates & Standards

Key Features

- StorageTech™ PW Model 301 internal materials are AISI 316 or 304 stainless steel.
- Easy to clean internal materials.
- Easy to install. You do not need a special tool or experience to install the StorageTech Flame Arrester Model 300.
- StorageTech™ PVV Model 301 comes with the paint color you choose.
- Standard manufacturing comes with API 150 class flange; however other flange types are available on request.
- Protection cap is manufactured from aluminum material.

Flame Arrester

End-of-line, deflagration

Model 310

Product Description

Storagetech™ Model Number 310 Flame Arrester is a safety device that has a flame barrier with a large number of defined passage gaps, whose gap cross section is set with regard to the properties of the flowing gas, is cooled effectively and secured against a flame flashback in the case of continuous combustion.

They also allow free venting in combination with flame protection for vertical vent applications.

They are typically mounted to a flange or pipe, which connects the vapor space of a storage tank or a pipeline.

Model Number 310 End-of-Line Deagration Flame Arrester is a safety device, designed to perform as an extinguishing barrier, which absorbs and dispels heat, reduces fire temperature and the oxygen level to stop the fire through layers of metal ribbons shaped with crimped corrugations.

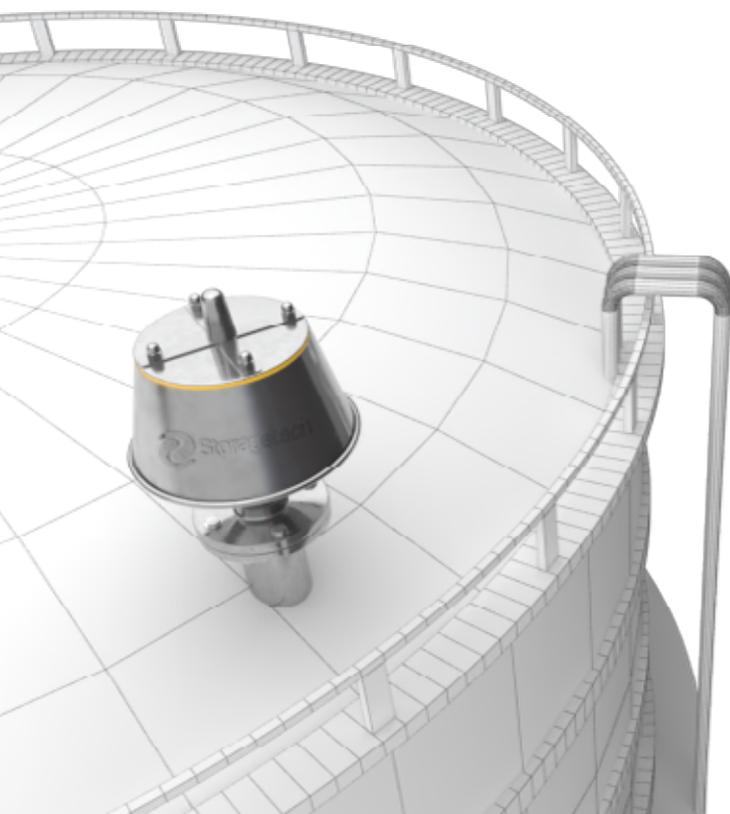

End-of-Line Deagration Flame Arrester is mounted at the end of a pipeline or at the end of a storage tank vent pipe, which enables tank venting and conagration protection for vertical vent applications.

It is designed to prevent outside particles such as dust, insects, water from accessing into the tank.

StorageTech provides the high quality and reliable solutions for your needs with 40 years of experience.

Your investments will be much safer with Storagetech™ Flame Arrester solutions, which are completely produced in accordance with international norms.

Standard Sizes	1" to 12" DN25 to DN300
Body / Flanges	1- Carbon steel 2- Stainless steel AISI 316 –L or 304-L 3- Aluminium 4- Customer Specification
Flange Drilling	API Class 150, PN16, and Special
Flame Element	Stainless steel AISI 316 –L or 304-L
O-ring Seal	Nitrile, Special
Screen	Stainless steel
Weather Hood	Carbon steel, Stainless steel or Aluminium
Paint Finish	1- Powder Coating, Colour RAL 9006 2- Epoxy Paint, Colour RAL 9006 3- Customer Specification

Manufacturing Materials

Housing	Cell	Gass Group
Carbon Steel	304 S.S.	IIB, IIA*
304 S.S.	316 S.S.	
316 S.S.		
Aluminum		

Design & Manufacturing Specifications

The size of the vent should be calculated in accordance with API Standard 2000 (ISO 28300) - Venting Atmospheric and Low-Pressure Storage Tanks or other international standards.

Product Benefits

StorageTech™ Flame Arrester Model 310 provides safety, It blocks the flame and does not allow flame travel through a pipeline or any in out-let. Protect s environment. Flame Arrester prevents your facility against fire that is caused by explosions. Special cap design protects the flame arrester interior material against dust and rain.

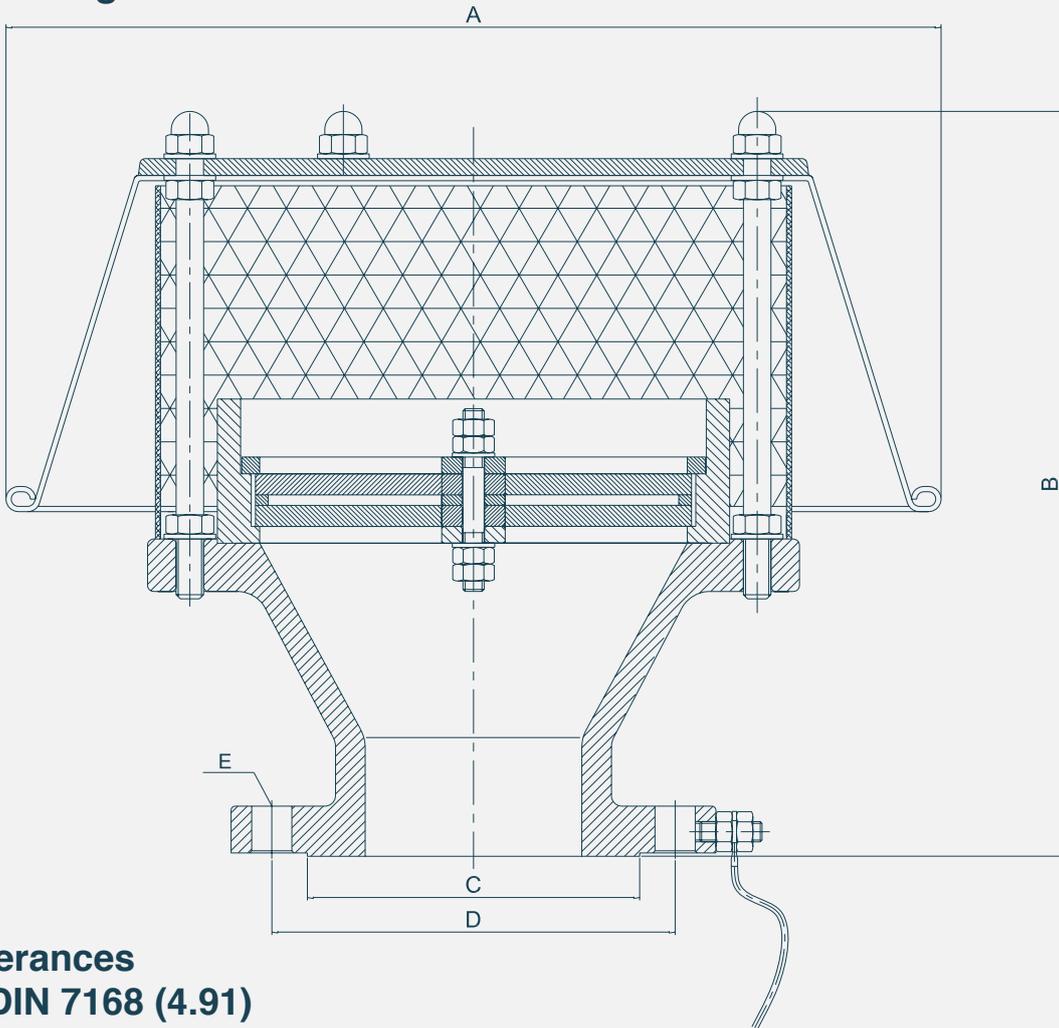

Certificates & Standards

Key Features

- StorageTech™ PW Model 310 internal materials are AISI 316 or 304 stainless steel.
- Easy to clean internal materials.
- Easy to install. You do not need a special tool or experience to install the StorageTech Flame Arrester Model 310.
- StorageTech™ PVV Model 310 comes with the paint color you choose.
- Standard manufacturing comes with API 150 class flange; however other flange types are available on request.
- Protection cap is manufactured from aluminum material.

Flame Arrester

End-of-line,
with automatic opening hood,
deflagration

Model 312

Product Description

StorageTech™ Flame Arresters (End-of-line, with Automatic Opening Hood) are passive devices that prevent the propagation of a flame or fire from entering into an opening in a pipeline or vessel discharging flammable vapor.

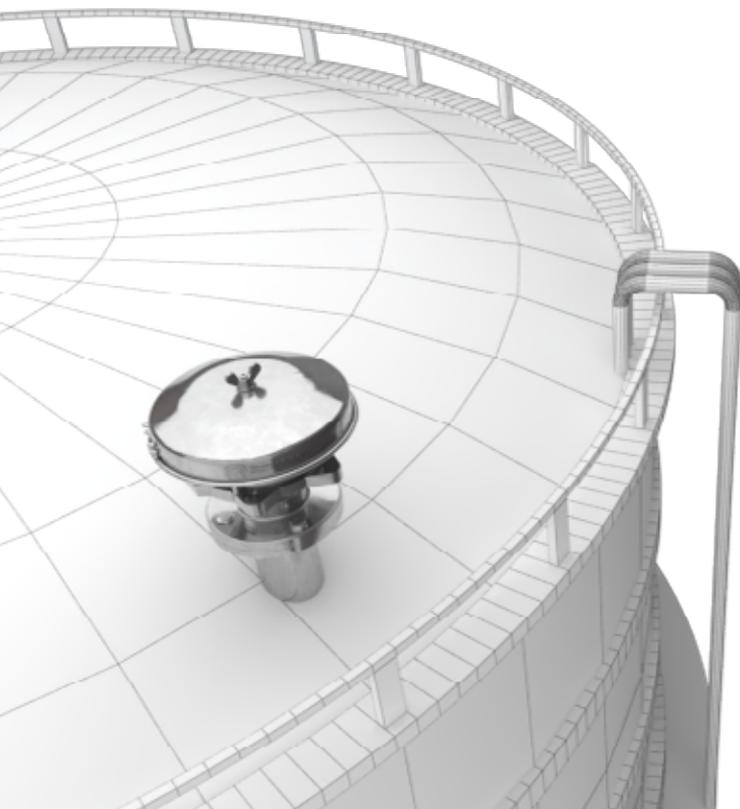

As an unique specification, Model 312 end of line flame arrester's weather hood is designed to react fire instantly tanks to it's fusible link, which is melted during the fire and let the weather hood release the gas/fire to the atmosphere. The flame cell, under normal operation, allows the free flow of vapor, although it does introduce some additional pressure loss that must be considered in the design of the system. This deflagration flame arrester is suitable for quenching subsonic flames and should be located at the end of a pipeline or exit from a vessel.

It should be installed in the horizontal plane and is not for use with pressure relief valves or pressure-vacuum relief valves. A weather hood and screen protects the vent and restricts dust, wind, rain, or insects from entering and degrading the efficacy of the product. The unit is supplied with an earth point, copper tag and cable. Cap has a special opening mechanism, which allows opening automatically after certain time and temperature, so fireflies freely to minimize the effect. The cell can be removed for cleaning or replacement.

StorageTech provides the high quality and reliable solutions for your needs with 40 years of experience.

Your investments will be much safer with StorageTech™ Flame Arrester solutions, which are completely produced in accordance with international norms.

Standard Sizes	1" to 12" DN25 to DN300

Design & Manufacturing Specifications

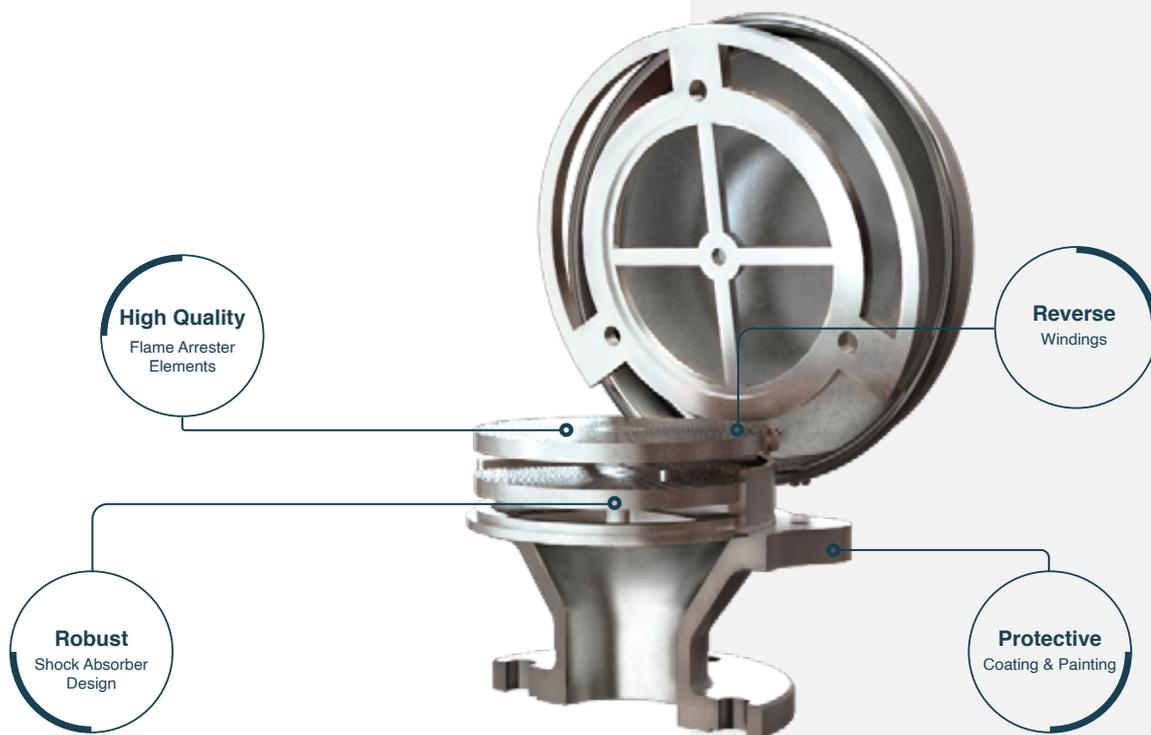

The size of the vent should be calculated in accordance with API Standard 2000 (ISO 28300) - Venting Atmospheric and Low-Pressure Storage Tanks or other international standards.

Product Benefits

StorageTech flame arrester Model 312 provides safety. It blocks the flame and does not allow flame travel through a pipeline or any in out-let. Protects environment. Flame arrester prevents your facility against fire that is caused by explosions. Special cap design protects the flame arrester interior material against dust and rain.

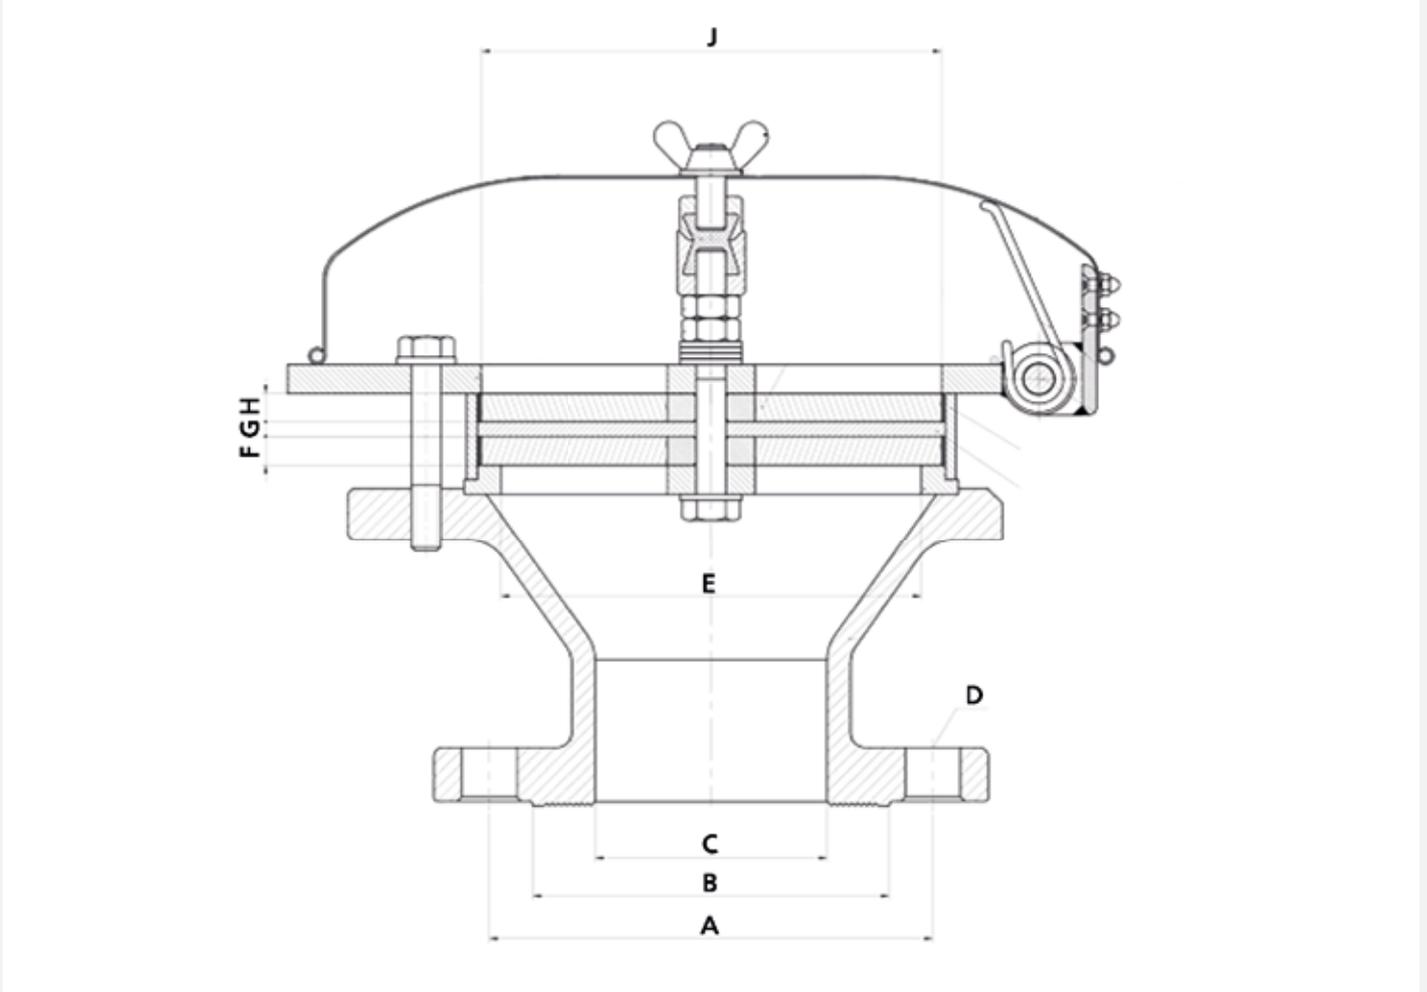

Certificates & Standards

Key Features

- Model 312 end of line flame arrester's weather hood is designed to react fire instantly tanks to it's fusible link, which is melted during the fire and let the weather hood release the gas/fire to the atmosphere.
- Internal materials are stainless steel and carbon steel.
- Easy to clean internal materials. Easy to install. You do not need a special tool or experience to install the StorageTech™ flame arrester Model 312.
- Comes with the paint color you choose.
- Standard manufacturing comes with all standards such as API 150, ASME and PN class flange; however other flange types are available up on request. Protection cap is manufactured from aluminum material.

Flow Capacity Curves

Flame Arrester

Horizontal, in-line, detonation

Model 321

Product Description

Storagetech Model Number 321 detonation flame arrester is a safety device that has a flame barrier with a large number of defined passage gaps, whose gap cross section is set with regard to the properties of the flowing gas, is cooled effectively and secured against a flame flashback in the case of continuous combustion by the fact that second gaps having a smaller gap cross section are arranged adjacent to the first gaps having the selected gap cross section.

The detonation arrester is designed to withstand higher pressures than the flame arrester and quench detonations.

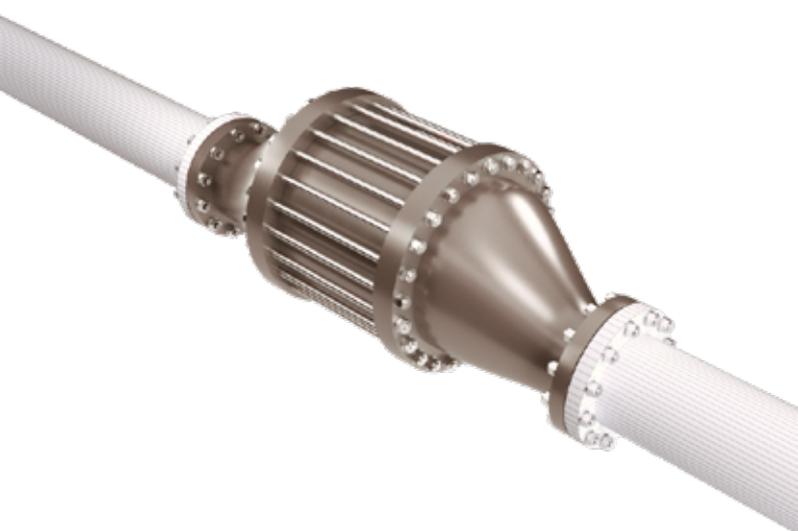

This in-line detonation flame arrester is designed to be installed in a pipeline where there is a significant distance between the arrester and the potential source of ignition, or where the pipe is not straight and smooth, and there may be roughness, obstructions, bends, junctions or changes in section in the intervening pipework.

They are typically mounted to a flange or pipe, which connects the vapor space of a storage tank or a pipeline.

StorageTech provides the high quality and reliable solutions for your needs with 40 years of experience.

Your investments will be much safer with Storagetech™ Flame Arrester solutions, which are completely produced in accordance with international norms.

Standard Sizes	1" to 12" DN25 to DN300
Body / Flanges	1- Carbon steel 2- Stainless steel AISI 316 –L or 304-L 3- Aluminium 4- Customer Specification
Flange Drilling	API Class 150, PN16, and Special
Flame Element	Stainless steel AISI 316 –L or 304-L
O-ring Seal	Nitrile, Special
Screen	Stainless steel
Weather Hood	Carbon steel, Stainless steel or Aluminium
Paint Finish	1- Powder Coating, Colour RAL 9006 2- Epoxy Paint, Colour RAL 9006 3- Customer Specification
ATEX Cert	Ex G IIB

Manufacturing Materials

Housing	Cell	Gass Group
Carbon Steel	304 S.S.	IIB
304 S.S.	316 S.S.	
316 S.S.		
Aluminum		

Design & Manufacturing Specifications

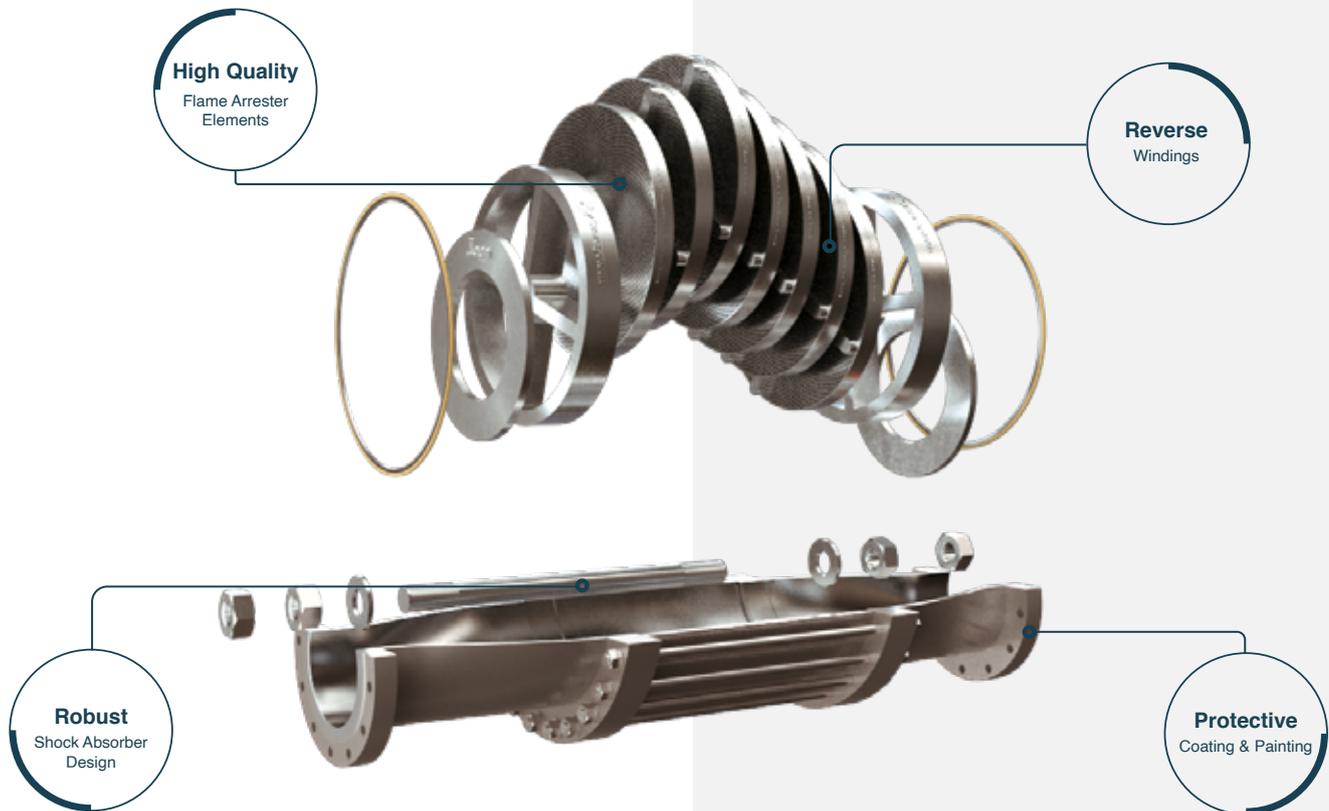

The size of the vent should be calculated in accordance with API Standard 2000 (ISO 28300) - Venting Atmospheric and Low-Pressure Storage Tanks or other international standards.

Product Benefits

StorageTech flame arrester Model 321 provides safety. It blocks the flame and does not allow flame travel through a pipeline or any in out-let. Protect s environment .Flame arrester prevents your facility against fire that is caused by explosions. Stop the shockwaves and controls the flash-back explosions.

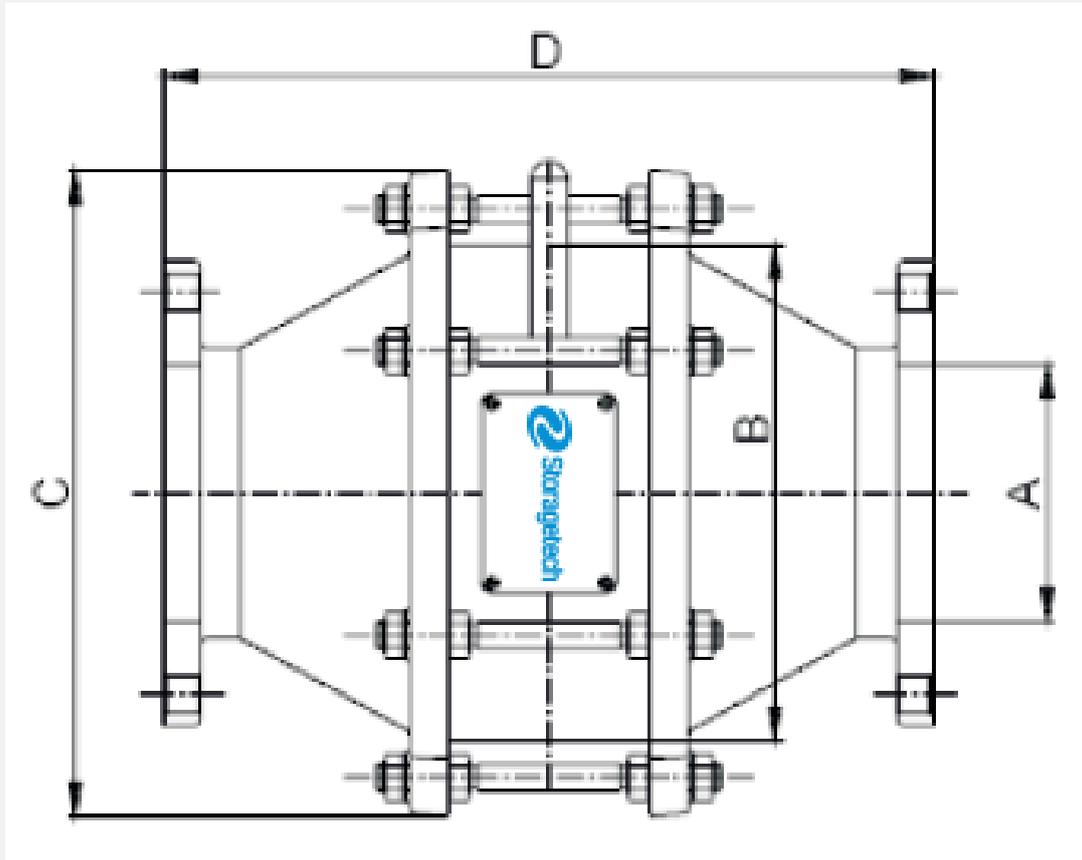

Certificates & Standards

Key Features

- StorageTech™ PW Model 321 internal materials are AISI 316 or 304 stainless steel.
- Easy to clean internal materials.
- Easy to install. You do not need a special tool or experience to install the StorageTech Flame Arrester Model 321.
- StorageTech™ PVV Model 321 comes with the paint color you choose.
- Standard manufacturing comes with API 150 class flange; however other flange types are available on request.
- Protection cap is manufactured from aluminum material.

Pressure Vacuum Relief Valve with Flame Arrester

End-of-line, weight loaded, integrated,
atmospheric deflagration proof
Model 102

Product Description

Storagetech™ Model 102 Pressure-Vacuum Relief Valve with Integrated End-of-line Flame Arrester provides total security of mind to operators of storage tanks. The Model 102 ensures protection against damage through over-pressurisation, implosion due to vacuum conditions, and prevents any external flame entering the tank.

In the closed position the pressure relief pallet and diaphragm assembly is held tightly against a seal to prevent the loss of vapour to atmosphere. As the internal pressure in the tank increases, due to product filling and vapour development, the pressure in tank increases and in the event that the set pressure of the unit is reached, the diaphragm will open and discharge the gas to atmosphere.

The opening set-point is selectable from a range between 1 and 28.1 W.C. (2.5 and 70 mbar), and the valve will re-seal when the tank returns to a safe pressure.

The vacuum pallet and diaphragm assembly is similarly maintained in the closed position.

As the internal pressure in the tank reduces, due to emptying, the balance between the tank pressure and the external atmospheric pressure changes, and when the set pressure of the unit is reached, the diaphragm opens to admit air and rebalance the internal pressure.

StorageTech provides the high quality and reliable solutions for your needs with 40 years of experience.

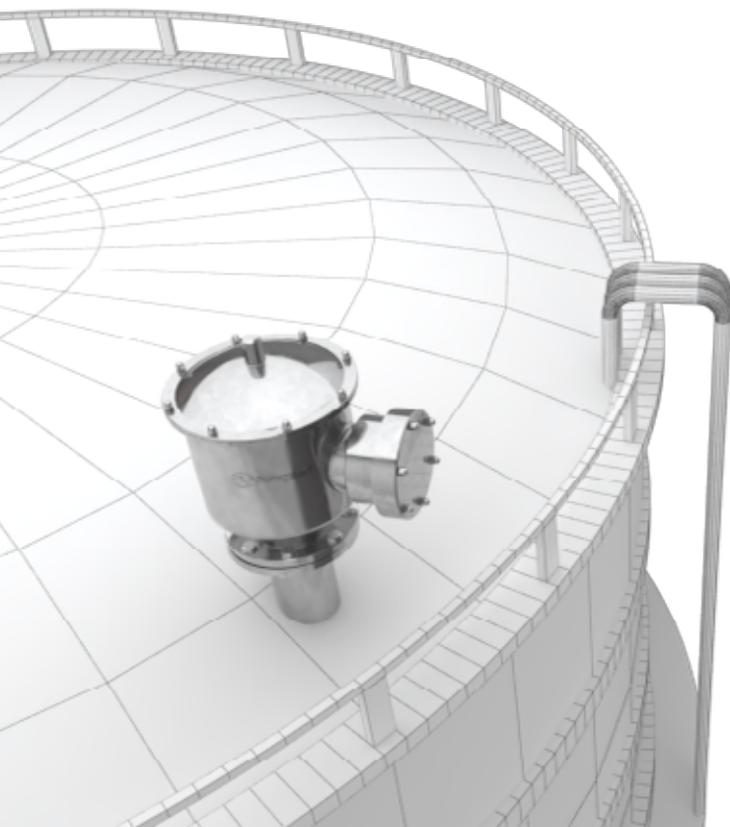

Your investments will be much safer with Storagetech™ Flame Arrester solutions, which are completely produced in accordance with international norms.

Setting Range

Pressure	Weight-loaded 2.5 mbar to 70 mbar
Ambient temp.	-20 C to +60 C

Construction

Sizes	2" to 12" 50 to 300mm
Flanges	API Class 150 RF, DIN PN16
Body	Carbon steel, stainless steel, or aluminium
Cap	Carbon steel, stainless steel, or aluminium
Cover	Carbon steel, stainless steel, or aluminium
Seals	Viton, Teon, and Klingrit
Pallet	Stainless steel AISI 304
Paint Finish	1- Powder Coating, Colour RAL 9006 2- Epoxy Paint, Colour RAL 9006 3- Customer Specification

The vacuum set-point is selectable from a range between 1 and 28.1 W.C. (2.5 and 70 mbar). The valve will reseal when the tank returns to a safe pressure.

Unlike the conventional PVRV, the Model 102 discharges vapour and takes in air through the same vent, consequently a single end-of-line flame arrester provides protection from the potential ingress of flames emanating from an external fire.

The integral Deflagration Flame Arrestor is designed to minimise pressure loss and with an element constructed with a <0.65mm Maximum Experimental Safe Gap is suitable for gas groups IIB and IIA.

Several features are inherent in the valve design to ensure a smooth, positive and effective operation.

The body is self-draining and drip design prevents condensate from settling on seating surfaces.

A diaphragm and seal manufactured from Teflon reduce the possibility of ice formation and sticky residues hindering the valve opening, while the pallet assembly moves freely on its guide post.

Manufacturing Materials

Housing	Cell	Gas Group
Carbon Steel	304 S.S.	IIA*
304 S.S.	316 S.S.	
316 S.S.		
Aluminum		

Design & Manufacturing Specifications

ISO 16852:2008 - Flame Arresters, Performance requirements, test methods and limits of use.

API RP 2210 - Flame Arrestors for Vents of Tanks Storing Petroleum Product.

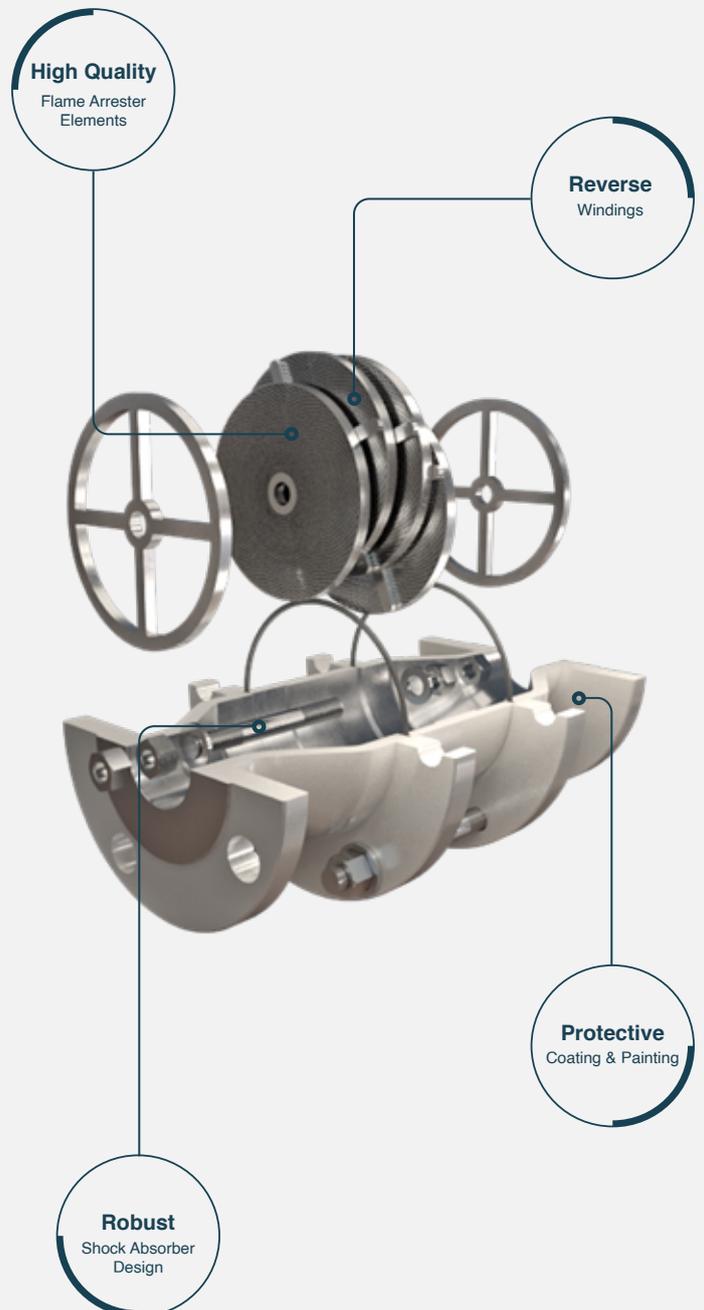

The size of the vent should be calculated in accordance with API Standard 2000 (ISO 28300) - Venting Atmospheric and Low-Pressure Storage Tanks or other international standards.

The integrity of the seal is tested for leakage in accordance with API Standard 2521 - Use of Pressure-Vacuum Vent Valves for Atmospheric Loss.

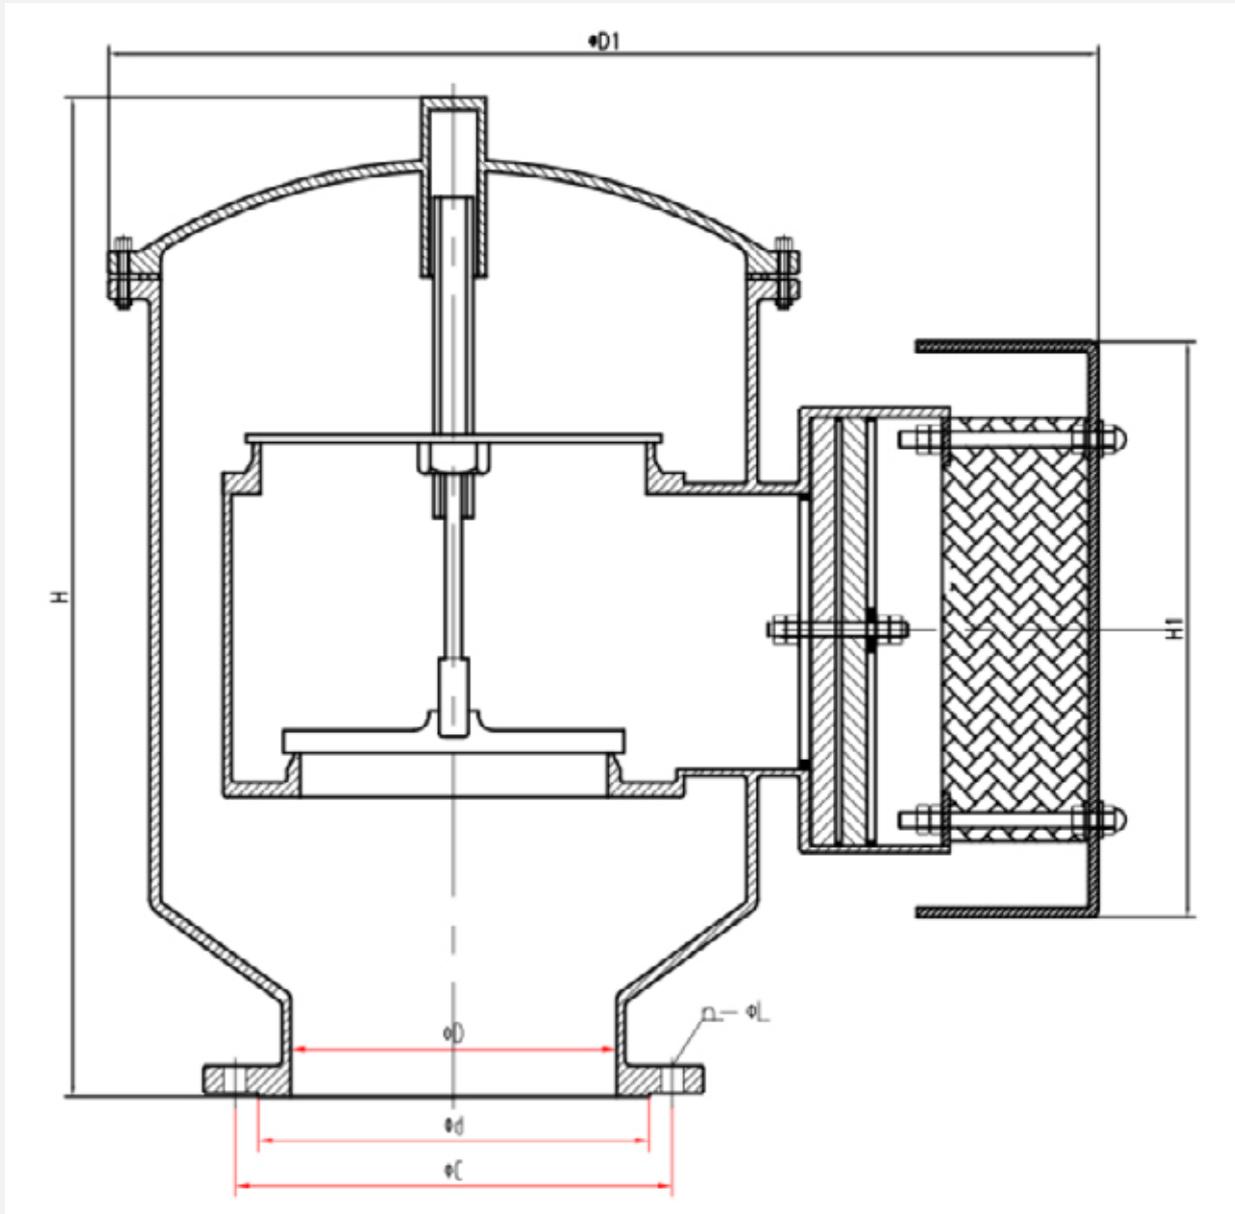

Product Benefits

StorageTech™ Flame Arrester Model 300 provides safety. It blocks the flame and does not allow flame travel through a pipeline or any in out-let. Protects environment. Flame arrester prevents your facility against fire that is caused by explosions.

Pressure Vacuum Relief Valve with Flame Arrester

End-of-line, weight loaded, combination, atmospheric deflagration proof
Model 330

Product Description

The assembly of this pressure relief valve with an effective flame arrester will enhance the safety of personnel, site location, and equipment, by reducing or eliminating the risk of ashover through the vent.

The Unit Will Comprise

Model 300	Flame Arrester - Vertical, in-line, deflagration
Model 100	Pressure Vacuum Relief Valve - Top mounted, end of line, weight
